TIMETABLE OF ACTIONS

Season	<i>ACTION for Direct Seeding and/or Tubestock Planting</i>
Summer	Monitor plants for – Water stress and water plants if necessary using minimum of 10L per plant (Do not water in the middle of a heat wave) Snails and treat if necessary Insect attack and treat if necessary
Autumn	Site preparation – about 2 weeks after break of season spray areas to be planted or direct seeded Remove treeguards from established plants where necessary - i.e. plant 200mm out of guard
Winter	Planting/sowing – Sandy areas plant early (June) Other areas plant July/August depending on the season Direct seeding through to early Spring
Spring	Spray for weed control Water plants if necessary ie. no Spring rains – minimum of 10L per plant Place tubestock orders for following season Check site for rabbit activity Check on snails and treat if required Watch for Redlegged Earth Mite and treat as necessary

NOTE:-

Direct seeding sites preferably need at least an 18 -24 month spray program before seeding to achieve optimum results.
